(54) CYPRIDINACEA LUCIFERIN DERIVATIVE AND
DETERMINATION OF SACCHARIDE
HYDROLASE

(57) Abstract:

PURPOSE: To obtain the subject new compound as a specific derivative from Cypridinacea luciferin, capable of making itself luminous as a substrate for saccharide hydrolase such as α -D-galactosidase, thus useful for determination, immunoassay, etc., of saccharide hydrolase.

CONSTITUTION: This new Cypridinacea luciferin derivative is expressed by formula I (R^1 and R^2 are each H, a 1-20C alkyl, 6-20C aryl or 7-19C arylalkyl; R^3 is a 1-5C alkyl or alkoxy; (n) is an integer of 0-5), which can make itself luminous as a substrate for saccharide hydrolase such as α -D-galactosidase, thus is useful for saccharide hydrolase determination, enzyme immunoassay by luminescent technique. The new compound is obtained by reaction between an imidazopyrazine derivative of formula II and a saccharide derivative of formula III (X is a halogen; R^4 is a 1-7C acyl) in the presence of silver trifluoromethanesulfonate and disodium phosphate to form a new intermediate of for-

mula IV, which is then subjected to solvolysis in the presence of an alkali.
